- Move plate of pTlpA36-wasabi to the incubator overnight
- Purpose: Get the cells growing again after being stored in the fridge over the weekend
- Move the plate (only one in the main part of the fridge not in a big box) into the incubator. Keep the plate upside down so the writing is facing up. Make sure the incubator is on. If it isn't, turn it on (power switch somewhere) and make sure it is set to 37C.
